PRICE GUIDE

2026 edition

2026 Miami Dental Implant *Price Guide*

Plain-language answers on implant options, what full-arch treatment costs, how long it takes, and how people pay for it.

PRANA DENTAL MIAMI • EDGEWATER • ENGLISH · ESPAÑOL

Why we wrote *this guide*

Dr. Rana

Prana Dental Miami · 3,000+ dental implants placed

Most people who ask me about implants have the same first question: *what will this actually cost?* It's a fair question, and it's often hard to get a straight answer.

This guide is my attempt at one. It walks through the main ways to replace teeth, how single implants and full-arch treatment compare, what our starting prices are built around, and what can move a price up or down.

I've placed more than 3,000 dental implants, and no two cases have been the same. So please treat the numbers here as a starting point, not a quote. Your real price comes after an exam and a 3D scan, and it's always given to you in writing, itemized, before you decide anything.

If you have questions after reading, bring them to a free consultation. We'll answer them in English or Spanish.

One tooth, or a *whole arch?*

Implant treatment usually falls into one of two paths. Which one fits depends on how many teeth are affected and the health of the bone and gums, which is what the exam and 3D scan are for.

Single implant is typically for

- One missing tooth, or one tooth that can't be saved
- Healthy neighboring teeth you'd rather not file down for a bridge
- Replacing a tooth without a removable appliance

Full arch is typically for

- Most or all teeth in the upper or lower jaw missing or failing
- Current denture wearers who want something fixed in place
- Replacing many failing teeth in one coordinated plan

	Single implant	**Full arch** *All-on-4 / All-on-X*
WHAT IT REPLACES	One tooth: an implant post, an abutment (connector), and a crown	A full upper or lower set of teeth, fixed onto several implants (often 4–6)
TYPICAL VISITS	Consult & 3D scan → implant placement → final crown, plus healing check-ins	Consult & 3D scan → treatment planning → surgery day → final arch, plus healing check-ins
TYPICAL TIMELINE	About 3–6 months of healing before the final crown	Fixed provisional teeth on surgery day when clinically appropriate; about 3–6 months of healing before the final arch
CAN ADD TIME	Bone grafting, extractions, or a sinus lift can add months. Every case is different.	
PRANA STARTING PRICE	*$1,999* Implant + abutment + crown. Final price after exam; grafting or extraction, if needed, is extra.	*$9,999 per arch* Fixed acrylic (PMMA) full-arch prosthesis. See page 05 for what can change it.

Five ways to *replace teeth*

The common options in plain language, with traditional dentures for comparison. The right choice depends on your mouth, your budget, and your goals.

OPTION	HOW IT WORKS	PROS	CONS
01 **Single implant** From *$1,999*	A titanium post replaces the tooth root, topped with an abutment and a crown. It stands on its own, without relying on the teeth next to it.	• Doesn't involve neighboring teeth • Fixed; brushed and flossed like a natural tooth	• Needs healing time before the final crown • May need grafting if bone is thin
02 **Implant bridge** Priced at consult	Two or more implants support a bridge that replaces several teeth in a row, so you don't need one implant for every missing tooth.	• Replaces several adjacent teeth with fewer implants • Fixed in place	• Cleaning under the bridge takes extra care • Depends on bone where the implants go
03 **Implant-supported denture** Snap-on / overdenture · Priced at consult	A denture that clips onto a small number of implants. It's far more stable than a traditional denture but still comes out for cleaning.	• Much less slipping than a regular denture • Often fewer implants than a fixed arch	• Removable; daily take-out and cleaning • Attachments wear and need periodic replacement
04 **Fixed full arch** All-on-4 / All-on-X · From *$9,999* per arch	A complete arch of teeth attached to several implants (often four to six). Only your dentist removes it. In many cases, provisional teeth are placed on surgery day.	• Fixed; doesn't come out at home • Covers the palate less than an upper denture	• A surgical procedure with healing time • Needs professional cleanings and check-ups
05 **Traditional dentures** For comparison · Priced at consult	A removable set of teeth held by suction and fit against the gums. No surgery, and usually the lowest upfront cost of these options.	• No surgery; shorter process • Lower upfront cost	• Can slip, especially lower dentures • Doesn't stimulate the jawbone; may need relines over time

FULL-ARCH IMPLANTS · STARTING PRICE

$9,999 *per arch*

STARTING PRICE

For a fixed acrylic (PMMA) full-arch prosthesis. Your exact price is given in writing after your consultation and 3D scan. Results vary.

What the starting price is built around

01 Implants placed by Dr. Rana, per your treatment plan

02 Abutments that connect the implants to your new teeth

03 Fixed acrylic (PMMA) provisional and final arch, per the treatment plan

04 3D-guided planning from your CBCT scan

What can change your price

01 Zirconia upgrade instead of acrylic

02 Additional implants (for example, All-on-6)

03 Bone grafting or a sinus lift

04 Extractions of remaining teeth

05 Sedation

06 Treating both upper and lower: that's two arches, each priced per arch

Every quote is itemized in writing before you decide.

You'll see each line (implants, prosthesis, grafting, sedation) before you commit to anything.

Why do implant prices vary so much across Miami? Quotes often bundle different things: the number of implants, the prosthesis material, whether extractions, grafting, or sedation are included. When comparing, ask each office for an itemized written quote so you're comparing the same treatment.

What the process *usually looks like*

These are general timelines. Every case is different, and your plan will spell out your own steps after the exam and 3D scan.

Single implant

ABOUT 3–6 MONTHS, START TO FINISH*

1

Consult & 3D scan

Exam, CBCT scan, and a written, itemized plan.

FREE

2

Implant placement

The implant post is placed in the jawbone.

DAY 1

3

Healing

Bone bonds to the implant while you go about life.

~3–6 MONTHS

4

Final crown

Abutment and custom crown are attached.

FINAL VISIT

Full arch

ABOUT 3–6 MONTHS AFTER SURGERY*

1

Consult & 3D scan

Exam, CBCT scan, and a written, itemized quote.

FREE

2

Treatment planning

Implant positions and your new teeth are planned digitally.

BEFORE SURGERY

3

Surgery day

Implants placed; fixed provisional teeth when clinically appropriate.

DAY 1

4

Healing

Implants integrate under the provisional teeth.

~3–6 MONTHS

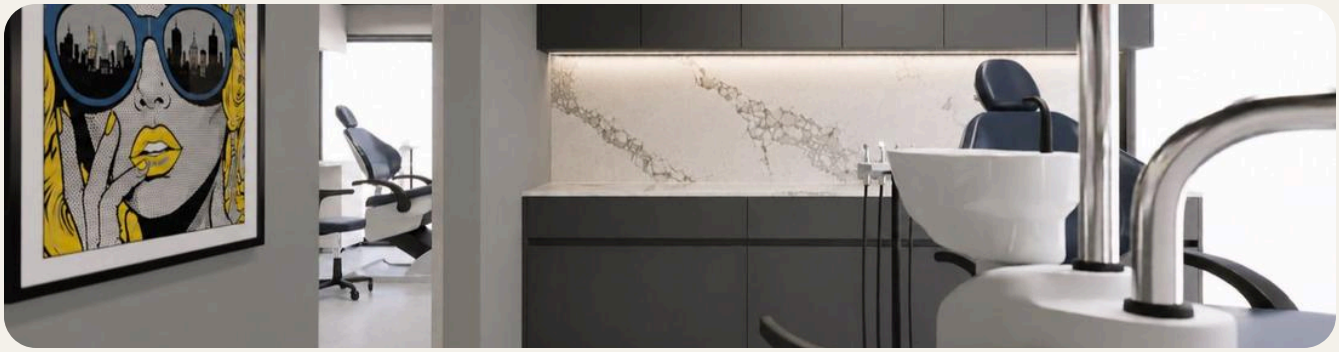

5

Final arch

Your final full-arch prosthesis is fitted.

FINAL VISIT

> *Bone grafting, extractions, or a sinus lift can add months. Healing check-ins happen along the way. Every case is different.

Ways people *pay for implants*

Many patients spread the cost into monthly payments. Financing is offered on approved credit through partners such as:

CareCredit | **Cherry** | **LendingClub** | **Sunbit**

How prequalification usually works

1

Get your written quote

After your consult and 3D scan, you'll know the total for your treatment plan.

2

Check your options

Many partners offer soft-credit prequalification, which lets you see possible plans without a hard credit inquiry.

3

Choose what fits

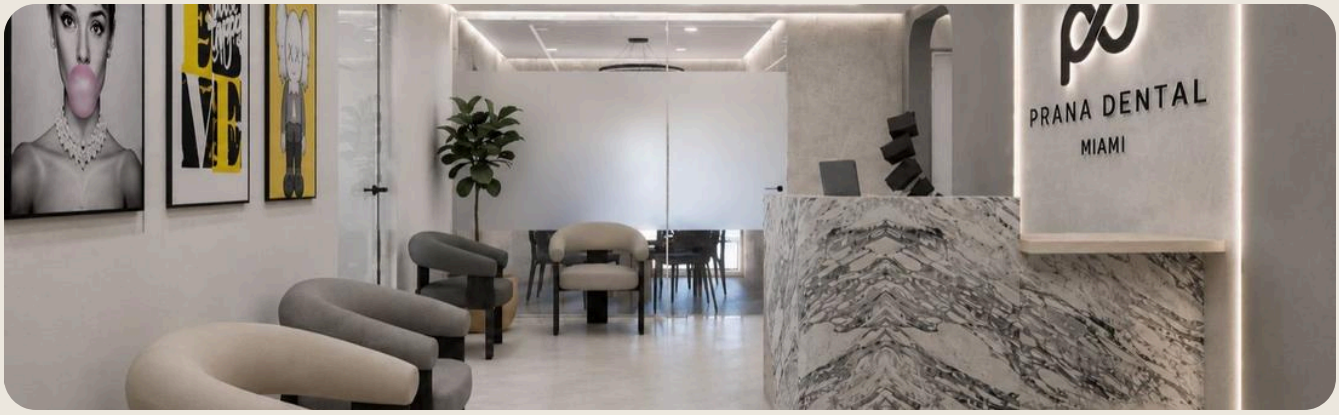

Compare terms, then decide. Final approval and terms come from the lender, not from us.

HSA / FSA

Health savings and flexible spending accounts can often be used for dental implant treatment. Check with your plan administrator about your balance and rules.

Dental insurance

Some plans cover part of implant treatment, such as the exam, extractions, or a portion of the crown. Coverage varies widely by plan, and annual maximums apply.

Financing is subject to credit approval by the lender. Terms, rates, and availability vary by lender and applicant.

Questions we *hear most*

Does getting implants hurt?

The area is numbed for the procedure, and many patients describe it as more pressure than pain. Soreness and swelling for a few days afterward are common. Sedation options can be discussed at your consult; whether sedation is right for you depends on your health history.

How long do implants last?

Implants are designed as a long-term solution, and many last for many years. How long they last depends on things like home care, regular check-ups, overall health, and habits such as smoking or grinding.

Am I too old for implants?

Age alone usually isn't the deciding factor. What matters more is your overall health, bone, and gums, which is why we start with an exam and a 3D scan.

I've been told I have bone loss. Can I still get implants?

Often, yes, but it depends on how much bone is there and where. Options can include bone grafting, a sinus lift, or angled implants used in some full-arch plans. The 3D scan shows what's possible.

What if I have diabetes or I smoke?

Both can affect healing, so an exam and a review of your health history are needed before anyone can say whether implants are a good fit. Well-managed conditions don't automatically rule implants out.

How many visits will it take?

A single implant usually involves a consult and scan, placement, and a final crown visit, plus healing check-ins. Full arch adds a planning step. Your plan will list your visits.

Can I get teeth the same day?

With full-arch treatment, fixed provisional (temporary) teeth can often be placed on surgery day when clinically appropriate. The final arch follows after healing.

Why do implant prices vary so much in Miami?

Quotes often include different things: number of implants, prosthesis material (acrylic vs zirconia), extractions, grafting, sedation. Ask for an itemized written quote to compare like with like.

What happens at the free consultation?

An exam, a 3D (CBCT) scan, a conversation about your goals and options, and an itemized written quote. There's no obligation to go ahead.

¿Hablan español?

Sí. Our team speaks English and Spanish, and you're welcome to have your consultation in either language.

Still have questions? *Ask them at your free consult.* (786) 579-0521

SCAN TO BOOK

Important information. This guide is general educational information only. It is not medical or dental advice and does not replace an exam by a licensed dentist. Whether implant treatment is right for you can only be determined after a clinical exam and 3D (CBCT) imaging. All prices are starting prices, are subject to change, and are confirmed in writing only after your consultation and scan; your final price depends on your treatment plan, including materials (e.g., zirconia), number of implants, bone grafting or sinus lift, extractions, and sedation. The $9,999 starting price is per arch for a fixed acrylic (PMMA) full-arch prosthesis. The $1,999 single-implant price includes implant, abutment, and crown; grafting or extraction, if needed, is extra. Timelines are typical ranges, not guarantees; every case is different. Results vary. Financing is offered on approved credit through third-party lenders; terms and availability are set by the lender. Insurance and HSA/FSA eligibility depend on your plan. The free consultation and 3D scan carry no obligation to proceed with treatment.
